2. Career Objective

I am Parshuram Yadav, a BSc (Hons) graduate in Computer Networking & IT Security from Islington College, with practical experience in cybersecurity, penetration testing, security research, network and cloud security, threat detection, and security automation. I have hands-on experience in vulnerability assessment, web application penetration testing and Network security testing, and executing security-focused tools and technologies including Burp Suite, Nmap, Metasploit, Wireshark, Suricata, Snort, Linux, Python, AWS, Docker, and Git. I am passionate about identifying vulnerabilities, researching emerging threats, strengthening security posture, and leveraging automation and AI to develop effective cybersecurity solutions.

3. Education

Islington college

2022 – 2025

- London Metropolitan University
- Kamalmarg, Kamalpokhari, Kathmandu
- BSc (Hons) Computer Networking & IT Security

Capital College and Research Center

2018 - 2020

- Balkumari, Kathmandu
- (National Examination Board) NEB +2
- Management and Computer Science

Sagarmatha Higher Secondary School

2016 - 2018

- Siraha Mirchaiya
- Secondary Education Examination (SEE)

4. Working Experience

Yango

Support Specialists

Jan 2026 – Present

- Provide timely technical and customer support through chat, email, and other communication channels.
- Troubleshoot and resolve customer issues related to accounts, applications, payments, and services.
- Investigate reported problems and identify appropriate solutions based on support procedures.
- Assist customers with account setup, verification, login, and service-related requests.
- Handle customer complaints professionally and work toward effective resolutions.
- Escalate complex or unresolved issues to the appropriate technical or specialized teams.
- Maintain accurate records of customer interactions, issues, and resolutions.
- Follow company policies, support guidelines, and service-level requirements.
- Collaborate with internal teams to resolve technical and operational issues.
- Provide clear instructions and guidance to customers to improve their overall experience.

Nepal realistic Solution (NRS)

Cyber Security Intern

Sept 2024 - Feb 2025

- Developed and enforced practices aligned with Networking, Troubleshooting and cloud-native environments.
- Hands on Implementation and Practice on IAM, EC2, S3 bucket, VPC.
- Integrated industry-standard best practices (NIST, ISO 27001) security frameworks to ensure compliance and operational consistency.

- Conducted comprehensive Vulnerability Assessment and Penetration Testing (VAPT) across cloud and hybrid networks, identifying critical misconfigurations and access risk.
- Performed risk assessments and security evaluations, network segmentation, and access controls.
- Recommended and implemented security enhancements using infrastructure-as-code principles, contributing to automated and scalable network defense mechanisms.

ING Skill Academy

Cyber Security Researcher

Oct 2023 - Aug 2024

- Designed and delivered cybersecurity training programs for students and professionals.
- Conducting research on emerging threat in the digital landscape
- Created Capture the Flag (CTF) challenges to develop hands-on skills in ethical hacking and threat detection.
- Conducted workshops on ethical hacking and real-world attack simulations to 300+ Students .
- Led security awareness sessions to promote a proactive security culture.
- Researched emerging cybersecurity threats and integrated findings into training material.
- Mentored individuals in ethical hacking, vulnerability analysis, and secure coding practices.

5. Skill

Technical Skill

Penetration Testing & VAPT:

- Web Application Security: OWASP Top 10, XSS, SQL Injection, CSRF, IDOR/Broken Access Control
- API Security Testing: REST APIs, Authentication, Authorization, Input Validation
- Network Security Testing: Network Scanning, Service Enumeration, Vulnerability Identification
- Vulnerability Assessment: Vulnerability Scanning, CVE Analysis, Risk Identification
- Security Testing Tools: Burp Suite, Nmap, Nuclei, OWASP ZAP, Metasploit
- Reconnaissance: Subdomain Enumeration, DNS Enumeration, Technology Fingerprinting
- Manual Testing: Authentication, Session Management, Access Control, Business Logic Testing
- Reporting: Vulnerability Validation, Evidence Collection, Risk Assessment, Remediation Recommendations
- Security Frameworks: OWASP Testing Guide, OWASP Top 10, CVSS

Security Auditing & Compliance:

- Security Auditing: Security Controls Assessment, Policy Review, Risk Identification, Compliance Audits
- NIST: NIST Cybersecurity Framework (CSF), Security Controls, Risk Management
- ISO/IEC 27001: ISMS, Information Security Controls, Risk Assessment, Compliance
- PIMS: Privacy Information Management System, Privacy Controls, Data Protection, Privacy Risk Assessment.
- Risk Management: Risk Identification, Risk Analysis, Risk Treatment, Mitigation Planning
- Security Governance: Security Policies, Procedures, Standards, Control Documentation
- Compliance & Reporting: Audit Evidence, Gap Analysis, Findings Documentation, Remediation Tracking

Networking:

- Router and switch configuration (Cisco, Juniper)
- Network Address Translation (NAT), Access Control Lists (ACL)
- Secure Shell (SSH) setup and management
- Routing protocols, OSPF, BGP
- Virtual Private Network (VPN) setup (IPsec, SSL VPN)
- Dynamic Host Configuration Protocol (DHCP) and Domain Name System (DNS) configuration
- VLANs, STP (Spanning Tree Protocol), and EtherChannel
- Network monitoring and packet analysis (Wireshark, Tcpdump)
- Troubleshooting, System Diagnostic, User support, hardware/software issue resolution

Security Assessment Tools:

- Nmap, Wireshark, Metasploit, Burp Suite Professional, Nessus, Niko.
- Firewall configuration, intrusion detection, penetration testing, IDS/IPS (snort/Suricata) and ELK Stack

Programming Language (Automation)

- Python, Bash, Java

Database

- SQL, MYSQL, MongoDB

Operation System

- Red Hat Linux, Ubuntu, Kali Linux
- Windows, MacOS, Android

Cloud & Virtualization:

- AWS Cloud (EC2, S3, IAM, VPC)
- Virtualization: VMware, VirtualBox

Generative AI and Agentic AI

- ChatGPT, Gemini, Grok, Claude AI
- CodeX, Cursor AI, Windsurf, Zero Agent
- Prompting

Soft Skill

- Communication
- Time Management
- Project Management
- Leadership and Teamwork
- Problem Solving
- Creativity
- Flexibility

6. Projects

1. Wazhu SIEM Training

Completed a hands-on **Wazuh SIEM deployment and detection lab** covering the installation and configuration of the Wazuh Indexer, Wazuh Server, Dashboard, and endpoint Agents, including SSL certificate configuration for secure communication between components. Developed practical detection scenarios using **Wazuh, DVWA, Hydra, MHDDOS, and YARA** to monitor and analyze security events such as brute-force attempts, SQL/PHP injection, DDoS activity, file creation/modification/deletion, and malware indicators. Configured **File Integrity Monitoring (FIM)**, security alerts, custom visualizations, agent management, rules and decoders, and SOC dashboards for centralized security monitoring and incident analysis. The project also includes deployment configurations, proof-of-concept labs, troubleshooting procedures, and supporting documentation. [GitHub: [Click here](#)]

2. Threat Detection Platform (Final Year Project)

Developed cybersecurity platform capable of Detecting, Identifying, and Analyzing Network Security and Threats in real time. **Capable of Detecting DoS, DDoS, SSH/FTP brute force, SQL injection, enumeration, and port scanning.** The platform includes a user-friendly dashboard with **real-time traffic visualization, alerting, and reporting functionalities.** Integrated **Snort, Suricata, Scapy and Pyshark** with **AI models** utilized machine learning models trained on the **CIC-IDS 2018 dataset** and to detect various attacks such as for anomaly detection and used technologies like React, Django, and MySQL for the interface and backend. [GitHub: [Click here](#)]

3. IOT-Authentication system

Designed a security system to authenticate **IoT devices** and **prevent unauthorized access** to secure areas such as offices or restricted rooms. The system ensures that only authorized individuals can gain entry, with mechanisms in place to **detect spoofing attempts and alert on unauthorized access.** Key components include an **Arduino Uno microcontroller, a fingerprint sensor, a breadboard, and other IoT peripherals** for implementing **biometric authentication.** [GitHub: [Click here](#)]

4. Python Billing Application for Store

Developed a **billing software** for small retail shops using Python. It includes features such as **product selection, price calculation, automated invoice generation, and daily sales tracking**. The system improves operational efficiency by reducing manual billing errors and streamlining the checkout process. [GitHub: [Click here](#)]

5. Security Automation Script and Tools

Built a custom Automation testing tool to perform penetration testing on networks and systems. Includes modules for simulating **DoS/DDoS attacks, password sniffing, and automated data backups to assess system response and resilience**. The tool identifies potential weakness in system and provides also demonstrates offensive and defensive security knowledge in practical scenarios. [GitHub: [Click here](#)]

7. Research

1. Cyber security Landscape

Conducted research on the **21st-century cybersecurity landscape**, examining major **cyberattack techniques, emerging threats, attack surfaces, and modern defense strategies**. The research explores cybersecurity from both technical and non-technical perspectives, covering key security challenges across **digital systems, networks, applications, and organizations**, with a focus on understanding current threat trends and approaches used to mitigate cyber risks. [Read: [Click here](#)]

2. Security in computing

Researched and analyzed brute-force attack techniques to understand how **automated login attempts can exploit weak authentication mechanisms**. Conducted controlled experiments using Kali Linux and ethical hacking tools to examine attack processes, system responses, and authentication weaknesses. Investigated defensive techniques including **account lockout, CAPTCHA, 2FA, SSH hardening, and encryption** to reduce the risk of credential-based attacks. The research provided practical exposure to ethical hacking methodologies, vulnerability analysis, attack detection, and security mitigation. [Read: [Click here](#)]

3. Professional issues, Ethics and Computer Law

Having a detailed analysis of the **Ashley Madison data breach** to evaluate the cybersecurity and privacy risks associated with the compromise of sensitive personal information. Examined the incident's impact on data **confidentiality, information security, privacy protection, regulatory compliance, and organizational accountability**. The research assessed the security and governance lessons arising from the breach and highlighted the role of **data protection, access controls, risk assessment, incident response, and privacy-by-design** principles in strengthening the security of online platforms and protecting user information. [Read: [Click here](#)]

4. Risk and Security Management

Conducted research on information **security risk management, security policies, standards, and guidelines**, focusing on protecting organizations from potential cyber risks, data loss, and security incidents. Analyzed recent cyber threats and data breaches, including their evolution, potential organizational impact, and associated security risks. Evaluated effective **data-breach** response and mitigation strategies and examined the role of **security policies, standards, and guidelines in establishing structured security controls and strengthening** an organization's overall security posture. [Read: [Click here](#)]

5. Digital Investigation

Conducted a cybersecurity case study on **CVE-2017-11882**, a critical vulnerability affecting the Microsoft Office Equation Editor, examining its **root cause, exploitation risks, and security implications**. **Analyzed how vulnerabilities in legacy software** components can remain significant security risks within widely deployed applications and interconnected environments. The research **explored vulnerability management, patching practices, software security, user awareness**, and the importance of timely security updates in reducing exposure to known vulnerabilities. [Read: [Click here](#)]

6. Phishing Attacks

Researched on phishing attacks and **social engineering techniques** used to deceive users into revealing sensitive information or interacting with malicious content. **Analyzed common phishing methods, including email phishing, credential harvesting, malicious links, spoofed websites, and social engineering tactics**, along with their potential impact on individuals and organizations. The study examined detection and prevention techniques such as user awareness, email security controls, URL verification, multi-factor authentication (MFA), and security monitoring, highlighting the importance of combining technical controls with cybersecurity awareness to reduce phishing-related risks. [Read: [Click here](#)]

7. Cryptography

Conducted research on cryptography and its role **in protecting information and communications**, focusing on **confidentiality, integrity, authentication, and non-repudiation**. Studied fundamental concepts including **symmetric and asymmetric encryption, hashing, digital signatures, key management, and cryptographic protocols**. The research examined how cryptographic techniques are applied to secure sensitive data, network communications, authentication systems, and digital transactions, while highlighting the importance of appropriate algorithm selection and secure key management. [Read: [Click here](#)]

6. Training Certificate

1. Ethical Hacking and Penetration Testing (BugXploit) – 2026

- Ethical Hacking
- Penetration Testing
- Web Application Security
- Network Penetration Testing
- Vulnerability Assessment
- Vulnerability Analysis
- VAPT (Vulnerability Assessment & Penetration Testing)
- Bug Bounty Hunting
- Reconnaissance & Enumeration
- Security Vulnerability Reporting

2. Cloud Foundations (Aws Academy) – 2024

- Cloud Foundations
- Cloud Security Foundations
- AWS Academy Cloud Operations

3. Cyber Security (Cisco Network Academy) – 2023

- Cybersecurity Fundamentals
- Cybersecurity Threats & Attacks
- Network Security Fundamentals
- Data & Privacy Protection
- Security Principles
- Cybersecurity Risk Awareness
- Common Cybersecurity Vulnerabilities
- Social Engineering Awareness
- Security Best Practices
- Cybersecurity Career & Professional Practice

7. Event

- Owasp Kathmandu - 2024
- Pen-Tester Nepal – 2024

8. Language

- English, Nepali, Hindi
